1 Overview

This annex includes figures that shows error tradeoff characteristics for mugshot images. Each page contains one figure corresponding to one algorithm. Each figure is a plot of FNMR against FMR for six demographic groups: male and female, whites, asians and blacks.

2 Data

The mugshot dataset is described in Annex [Annex 1](#).

For the generation of the Figures in this annex, each algorithm executed the number of comparisons tabulated below using a total of 8 201 678 images. Note that we did not execute a full cross-comparison. In particular we only compared subjects of the same sex and same race. We disregard age in forming the comparison sets because the dataset under-represents the older demographic.

Race Label	Sex Label	Mated Comparison Count	Impostor Comparison Count	
1	A	F	10 995	3 000 000
2	A	M	139 342	3 000 001
3	B	F	263 910	3 000 007
4	B	M	1 954 864	3 000 009
7	W	F	362 816	3 000 012
8	W	M	1 033 237	3 000 017
9	Total		4061227	108000690

[comment on significance](#)

3 Fixed Threshold

A false match is declared if the comparison score is equal to, or exceeds, a threshold. This same value applies to all comparisons in all cells. The threshold value could be any value germane to that comparison algorithm. The threshold value was taken from a different experiment in which mugshot impostor pairs were compared. It is the value that gave a FMR of 0.00003 over that set.

4 Plot

The DET plots

This publication is available free of charge from: <https://doi.org/10.6028/NIST.IR.8280>

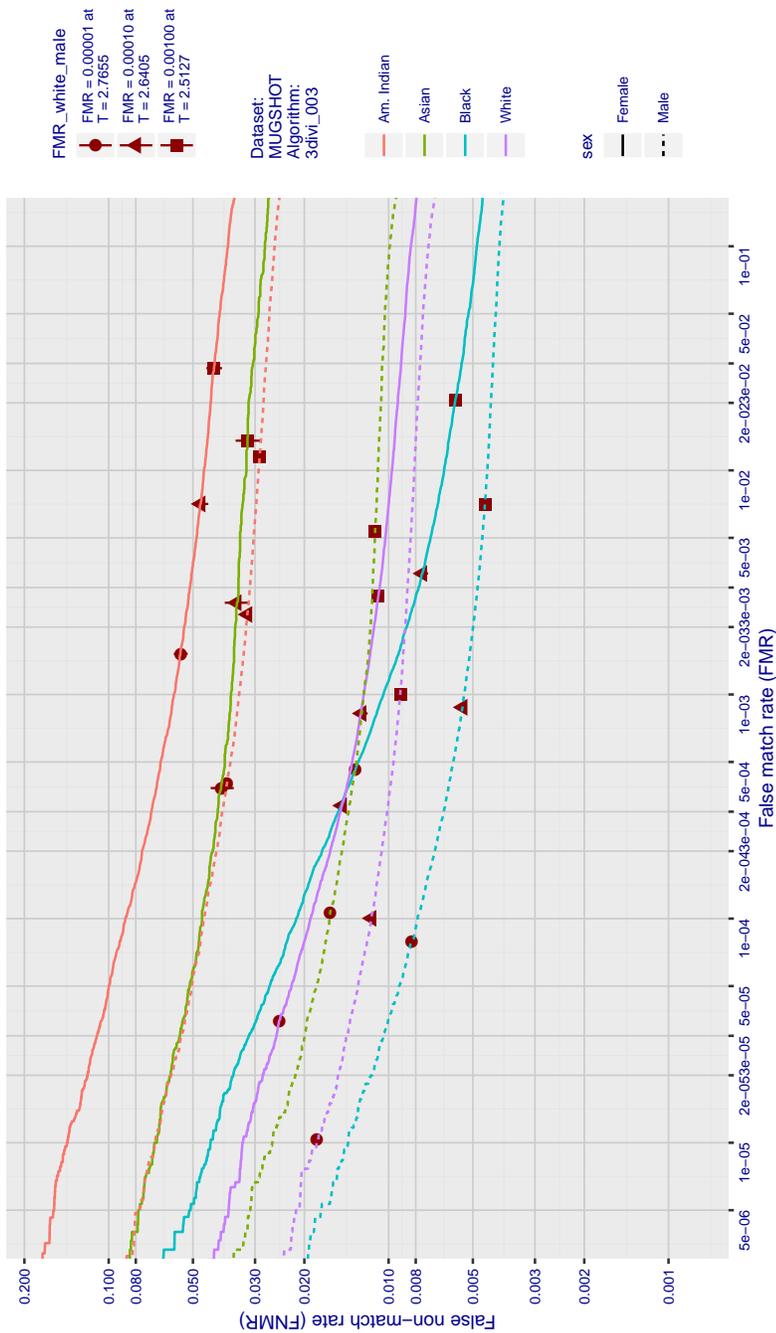

Figure 1: Verification error by sex and race: For algorithm 3divi-003 verifying mugshot images, the error tradeoff characteristics show false non-match vs. false match rates. The FMR estimates are computed for same-sex and same-race impostor comparisons. Each symbol (circle, triangle, square) corresponds to a fixed threshold - the vertical and horizontal displacements reveal, respectively, differences in FNMR and FMR between demographic groups. The vertical line through each symbol indicates uncertainty related to sample size - it spans 95

This publication is available free of charge from: <https://doi.org/10.6028/NIST.IR.8280>

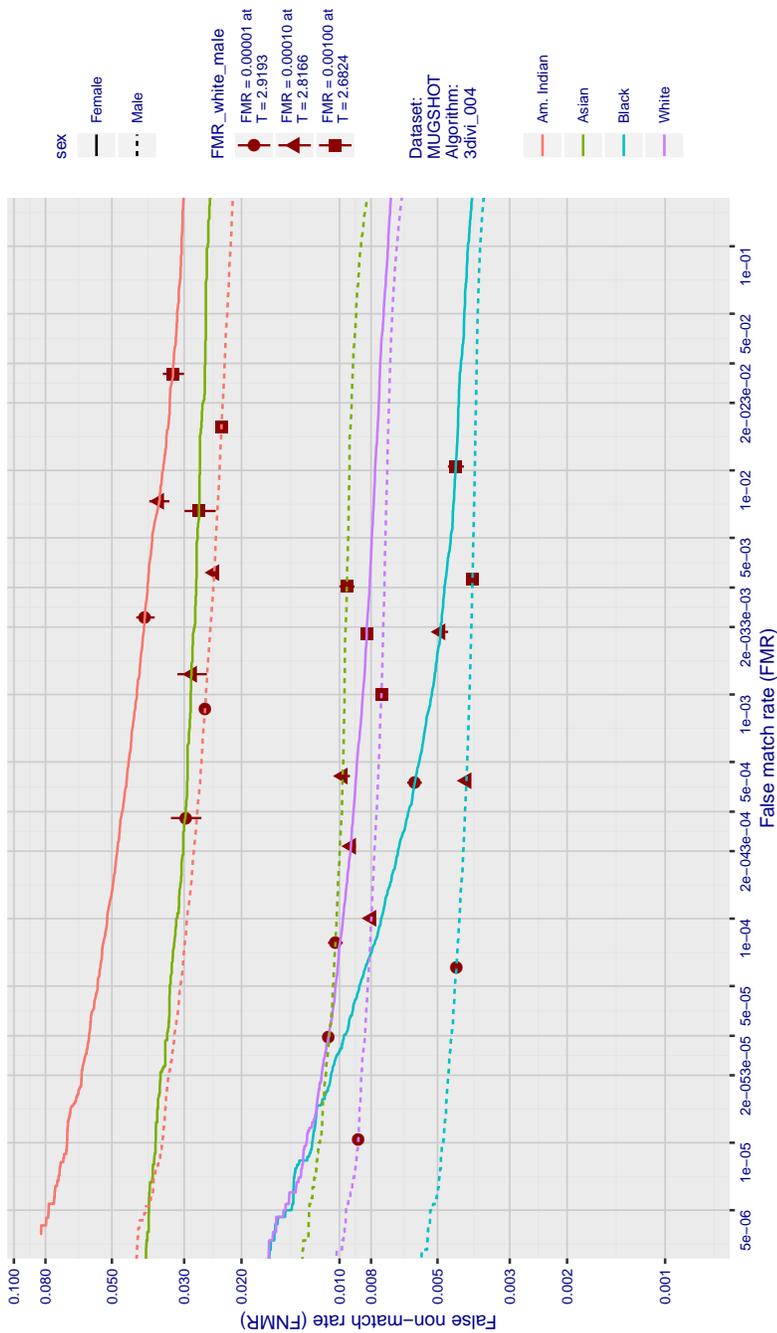

Figure 2: Verification error by sex and race: For algorithm 3divi-004 verifying mugshot images, the error tradeoff characteristics show false non-match vs. false match rates. The FMR estimates are computed for same-sex and same-race impostor comparisons. Each symbol (circle, triangle, square) corresponds to a fixed threshold - the vertical and horizontal displacements reveal, respectively, differences in FNMR and FMR between demographic groups. The vertical line through each symbol indicates uncertainty related to sample size - it spans 95

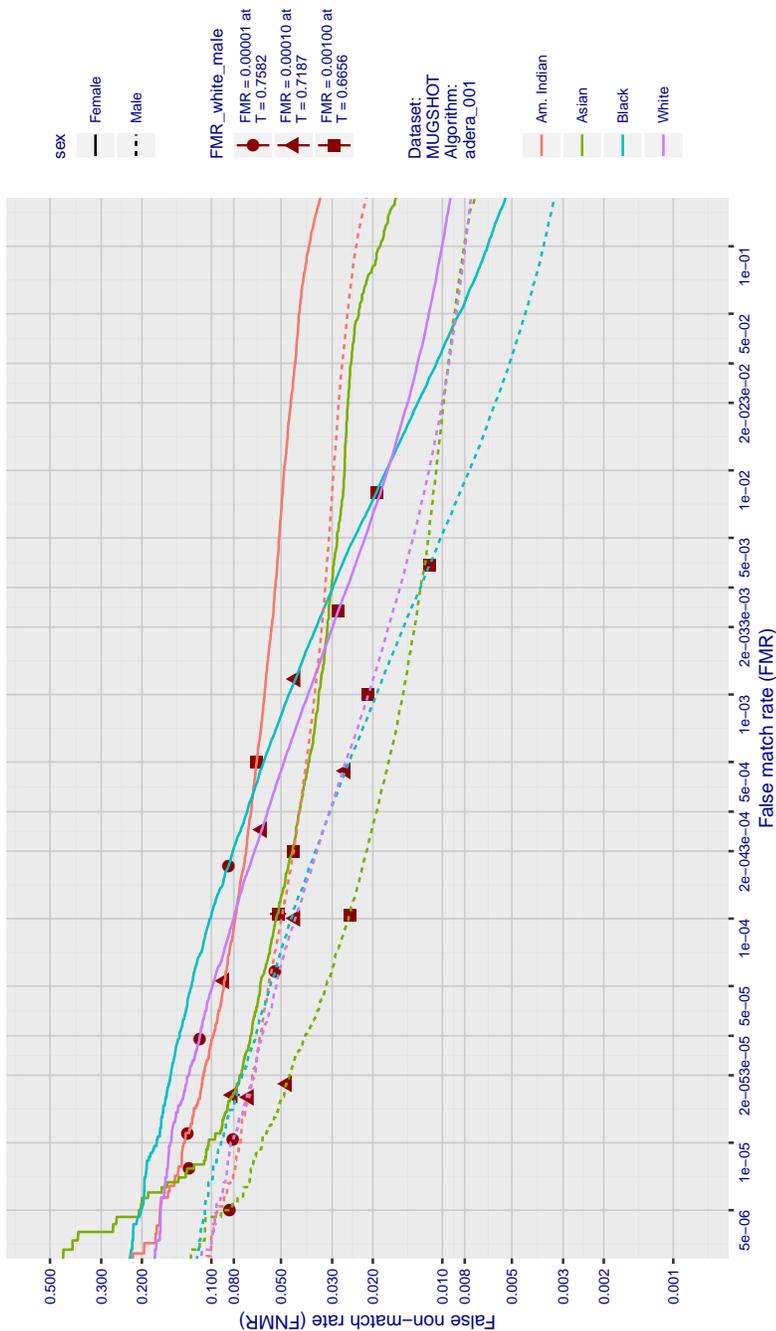

Figure 3: Verification error by sex and race: For algorithm adera-001 verifying mugshot images, the error tradeoff characteristics show false non-match vs. false match rates. The FMR estimates are computed for same-sex and same-race impostor comparisons. Each symbol (circle, triangle, square) corresponds to a fixed threshold - the vertical and horizontal displacements reveal, respectively, differences in FNMR and FMR between demographic groups. The vertical line through each symbol indicates uncertainty related to sample size - it spans 95

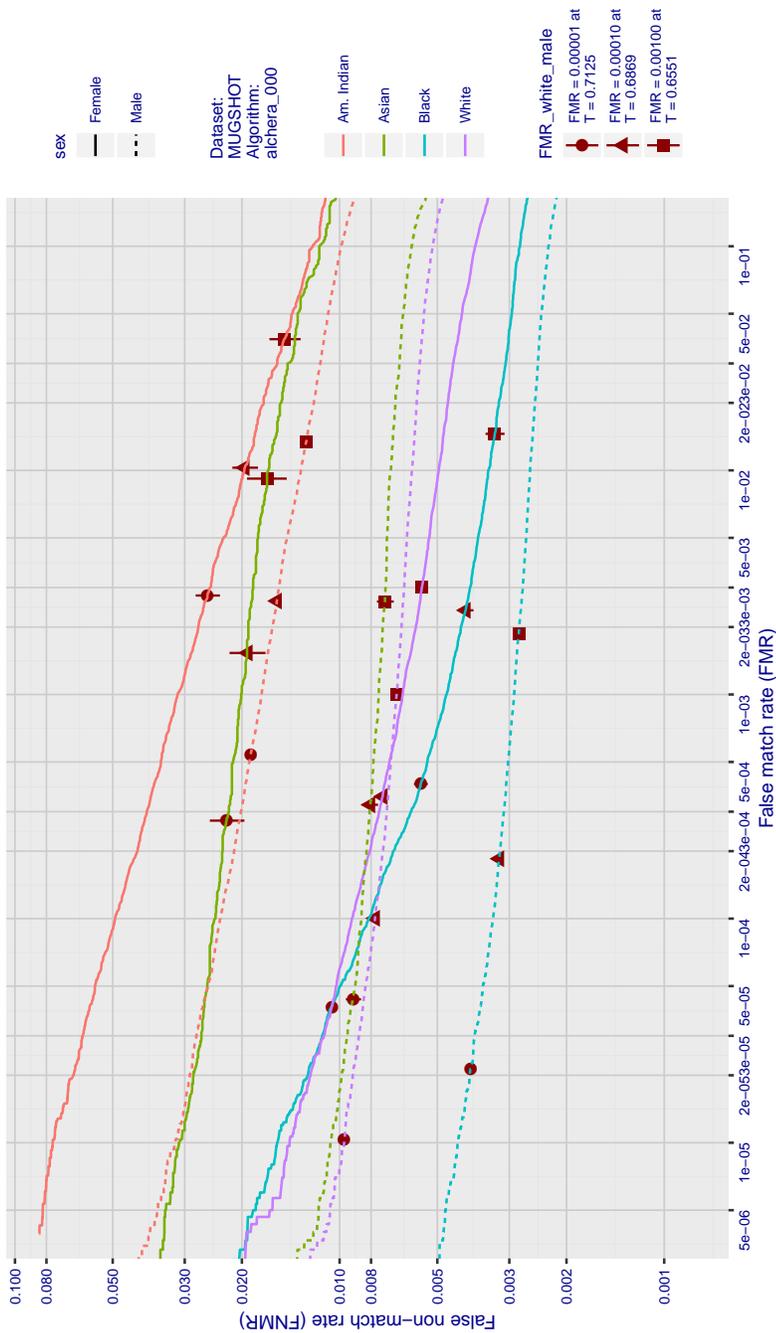

Figure 4: Verification error by sex and race: For algorithm alchera-000 verifying mugshot images, the error tradeoff characteristics show false non-match vs. false match rates. The FMR estimates are computed for same-sex and same-race impostor comparisons. Each symbol (circle, triangle, square) corresponds to a fixed threshold - the vertical and horizontal displacements reveal, respectively, differences in FNMR and FMR between demographic groups. The vertical line through each symbol indicates uncertainty related to sample size - it spans 95

This publication is available free of charge from: <https://doi.org/10.6028/NIST.IR.8280>

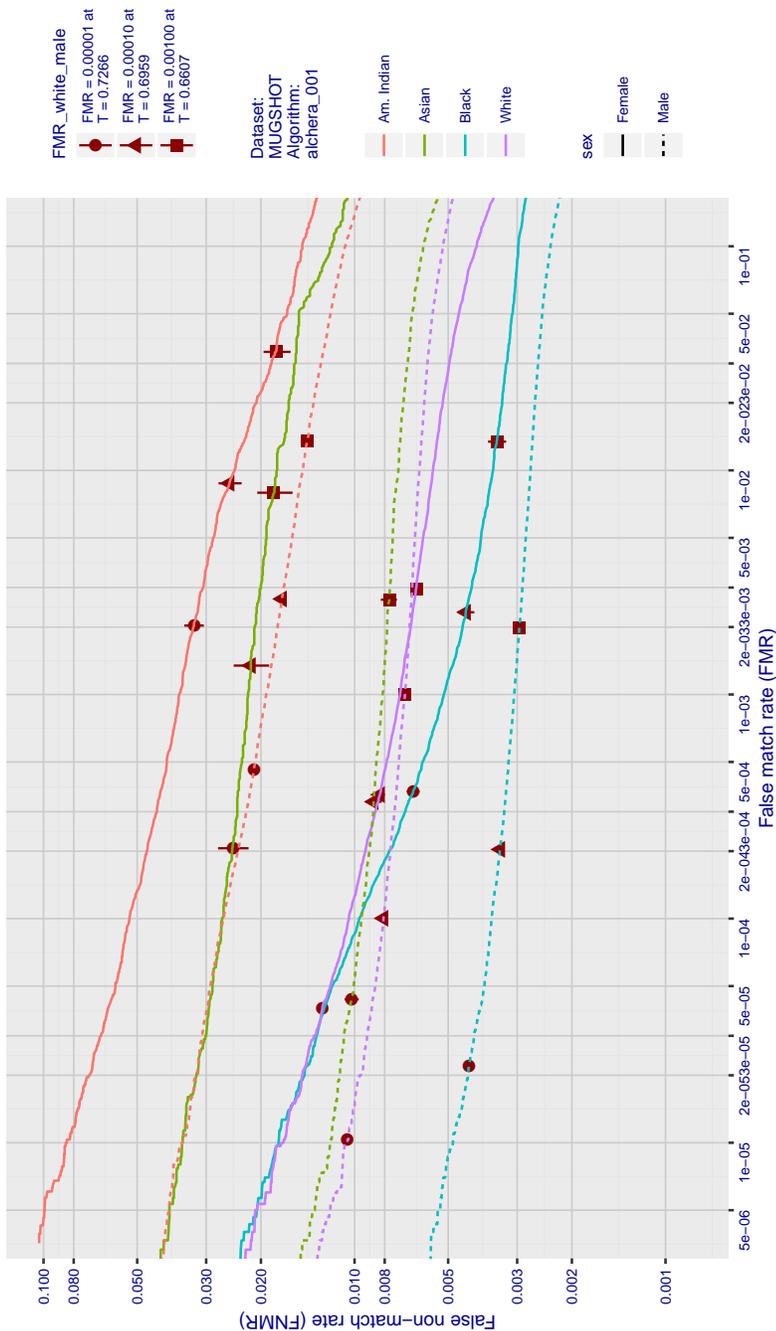

Figure 5: Verification error by sex and race: For algorithm alchera-001 verifying mugshot images, the error tradeoff characteristics show false non-match vs. false match rates. The FMR estimates are computed for same-sex and same-race imposter comparisons. Each symbol (circle, triangle, square) corresponds to a fixed threshold - the vertical and horizontal displacements reveal, respectively, differences in FNMR and FMR between demographic groups. The vertical line through each symbol indicates uncertainty related to sample size - it spans 95

This publication is available free of charge from: <https://doi.org/10.6028/NIST.IR.8280>

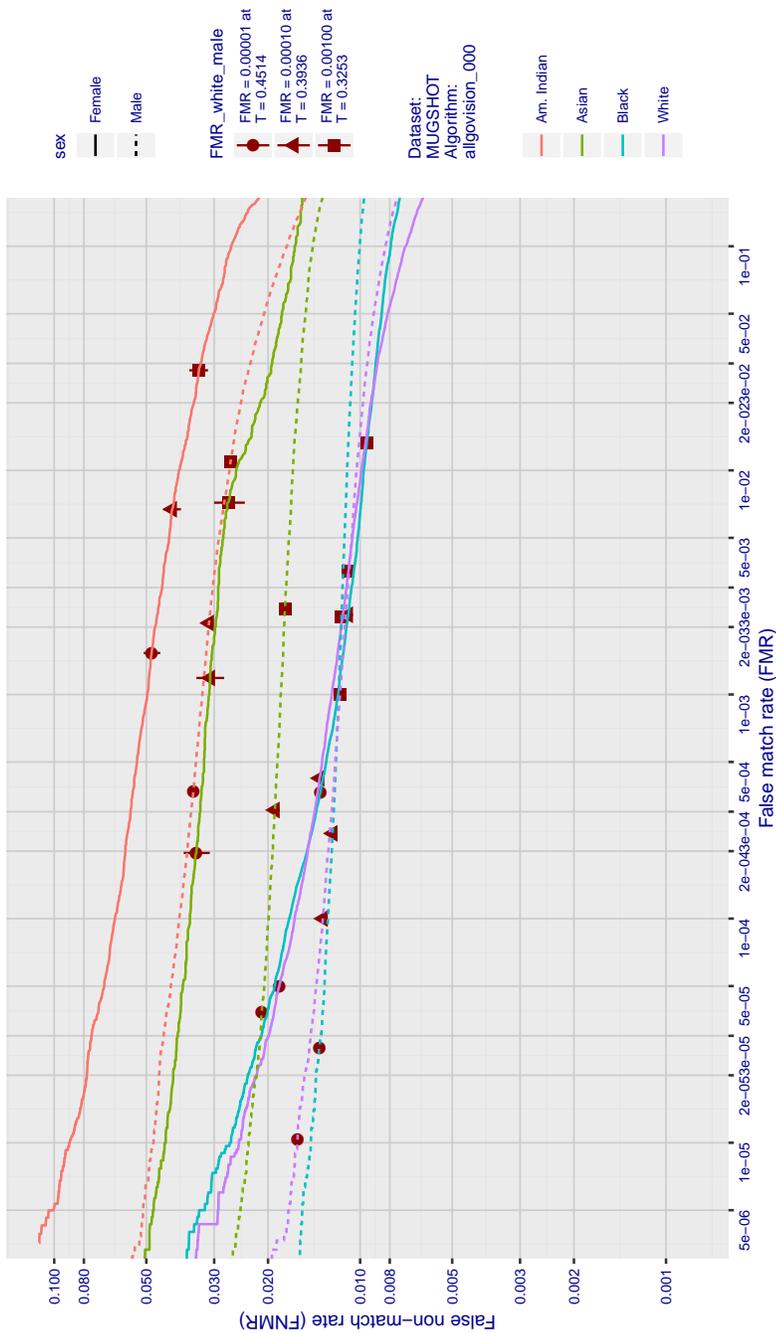

Figure 6: Verification error by sex and race: For algorithm allgovision-000 verifying mugshot images, the error tradeoff characteristics show false non-match vs. false match rates. The FMR estimates are computed for same-sex and same-race impostor comparisons. Each symbol (circle, triangle, square) corresponds to a fixed threshold - the vertical and horizontal displacements reveal, respectively, differences in FNMR and FMR between demographic groups. The vertical line through each symbol indicates uncertainty related to sample size - it spans 95

This publication is available free of charge from: <https://doi.org/10.6028/NIST.IR.8280>

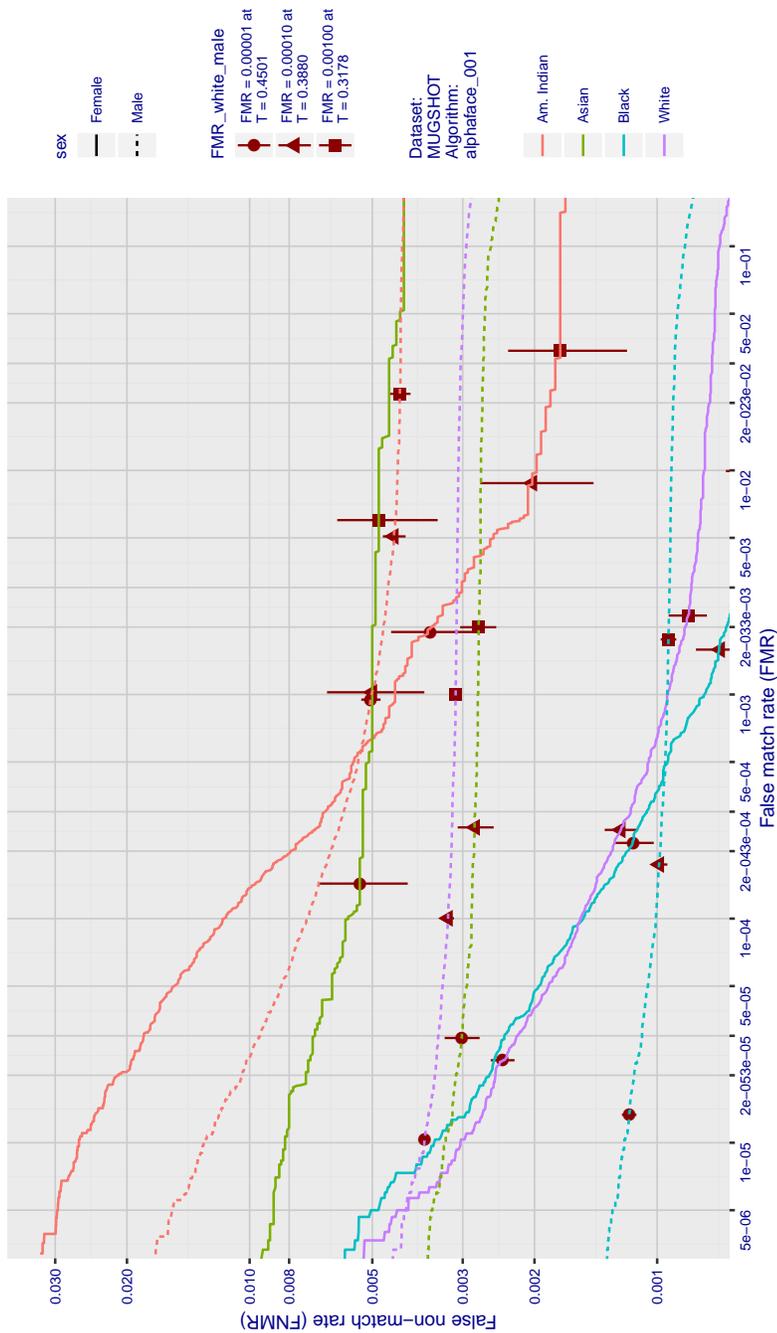

Figure 7: Verification error by sex and race: For algorithm alphaface-001 verifying mugshot images, the error tradeoff characteristics show false non-match vs. false match rates. The FMR estimates are computed for same-sex and same-race impostor comparisons. Each symbol (circle, triangle, square) corresponds to a fixed threshold - the vertical and horizontal displacements reveal, respectively, differences in FNMR and FMR between demographic groups. The vertical line through each symbol indicates uncertainty related to sample size - it spans 95

The vertical line through each symbol indicates uncertainty related to sample size - it spans 95

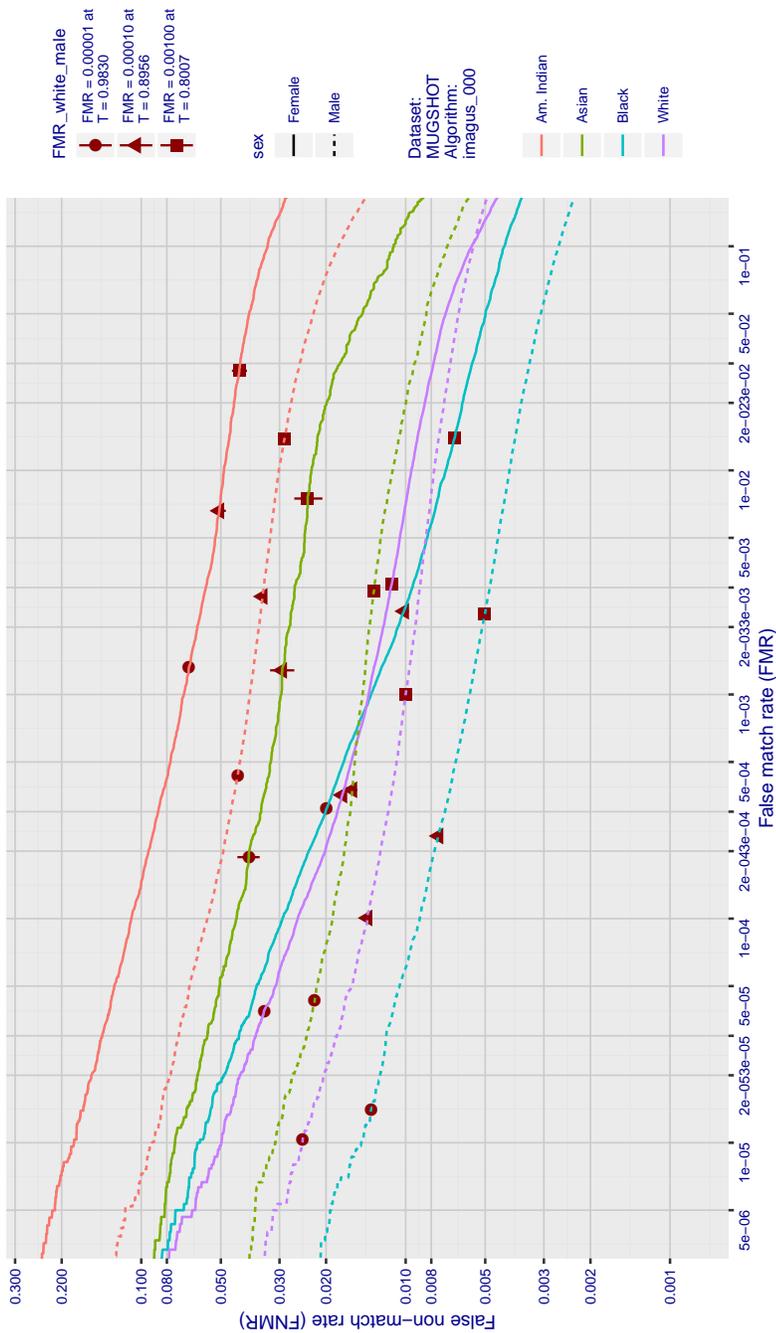

Figure 49: Verification error by sex and race: For algorithm imagus-000 verifying mugshot images, the error tradeoff characteristics show false non-match vs. false match rates. The FMR estimates are computed for same-sex and same-race impostor comparisons. Each symbol (circle, triangle, square) corresponds to a fixed threshold - the vertical and horizontal displacements reveal, respectively, differences in FNMR and FMR between demographic groups. The vertical line through each symbol indicates uncertainty related to sample size - it spans 95

This publication is available free of charge from: <https://doi.org/10.6028/NIST.IR.8280>

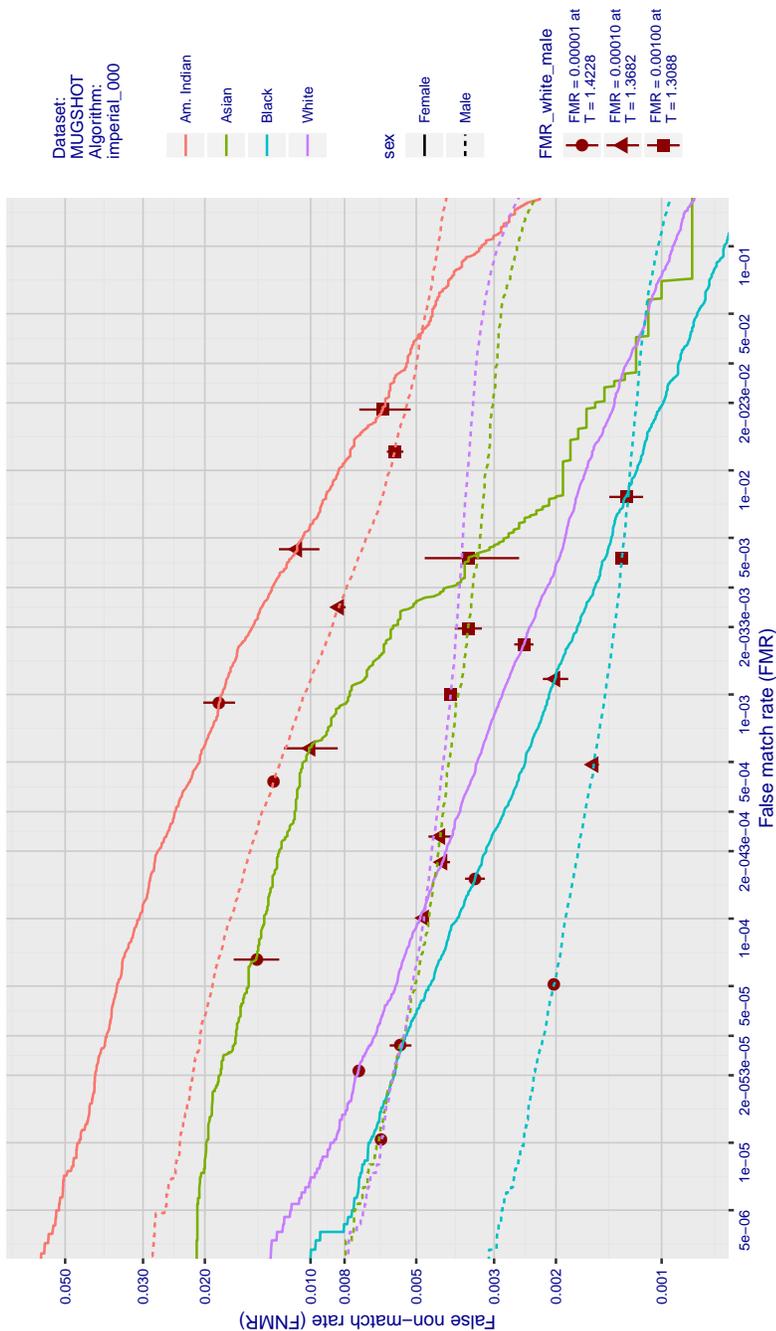

Figure 50: Verification error by sex and race: For algorithm imperial-000 verifying mugshot images, the error tradeoff characteristics show false non-match vs. false match rates. The FMR estimates are computed for same-sex and same-race impostor comparisons. Each symbol (circle, triangle, square) corresponds to a fixed threshold - the vertical and horizontal displacements reveal, respectively, differences in FNMR and FMR between demographic groups. The vertical line through each symbol indicates uncertainty related to sample size - it spans 95

This publication is available free of charge from: <https://doi.org/10.6028/NIST.IR.8280>

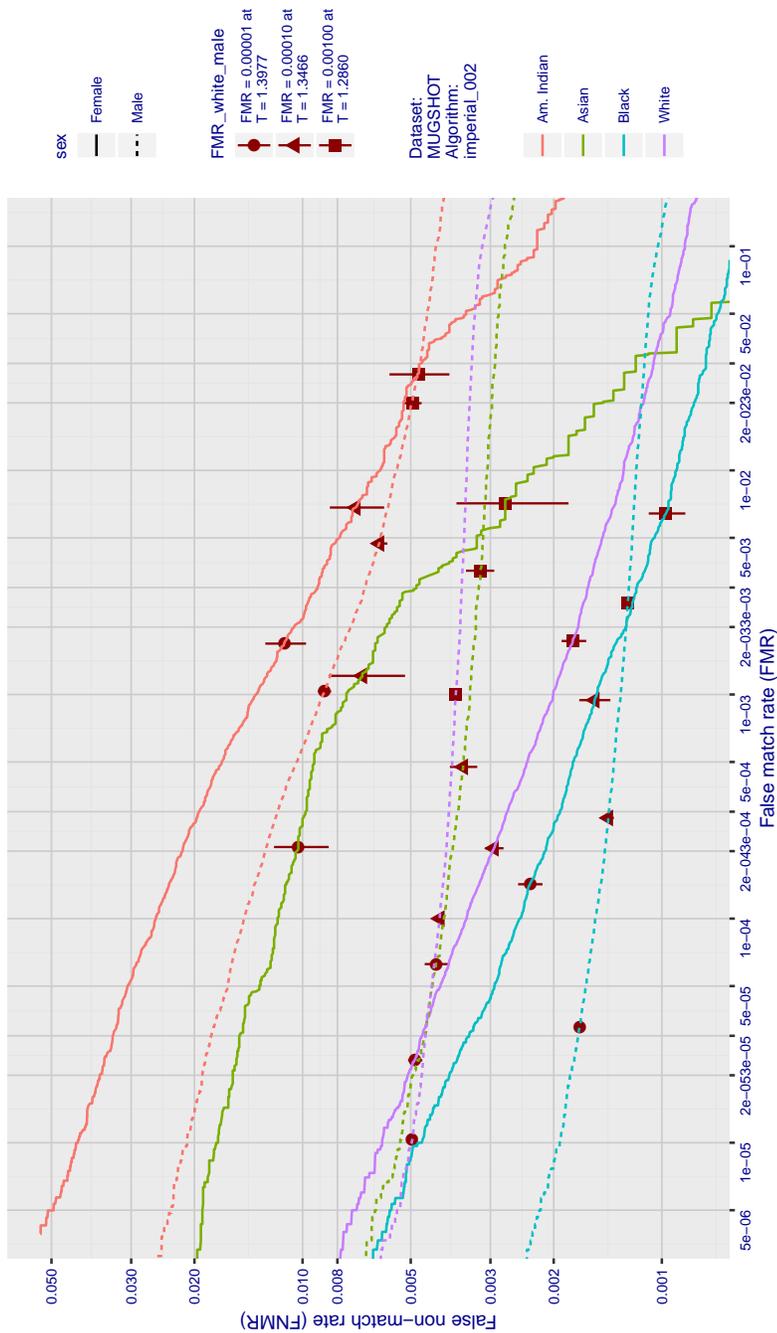

Figure 51: Verification error by sex and race: For algorithm imperial-002 verifying mugshot images, the error tradeoff characteristics show false non-match vs. false match rates. The FMR estimates are computed for same-sex and same-race impostor comparisons. Each symbol (circle, triangle, square) corresponds to a fixed threshold - the vertical and horizontal displacements reveal, respectively, differences in FNMR and FMR between demographic groups. The vertical line through each symbol indicates uncertainty related to sample size - it spans 95

This publication is available free of charge from: <https://doi.org/10.6028/NIST.IR.8280>

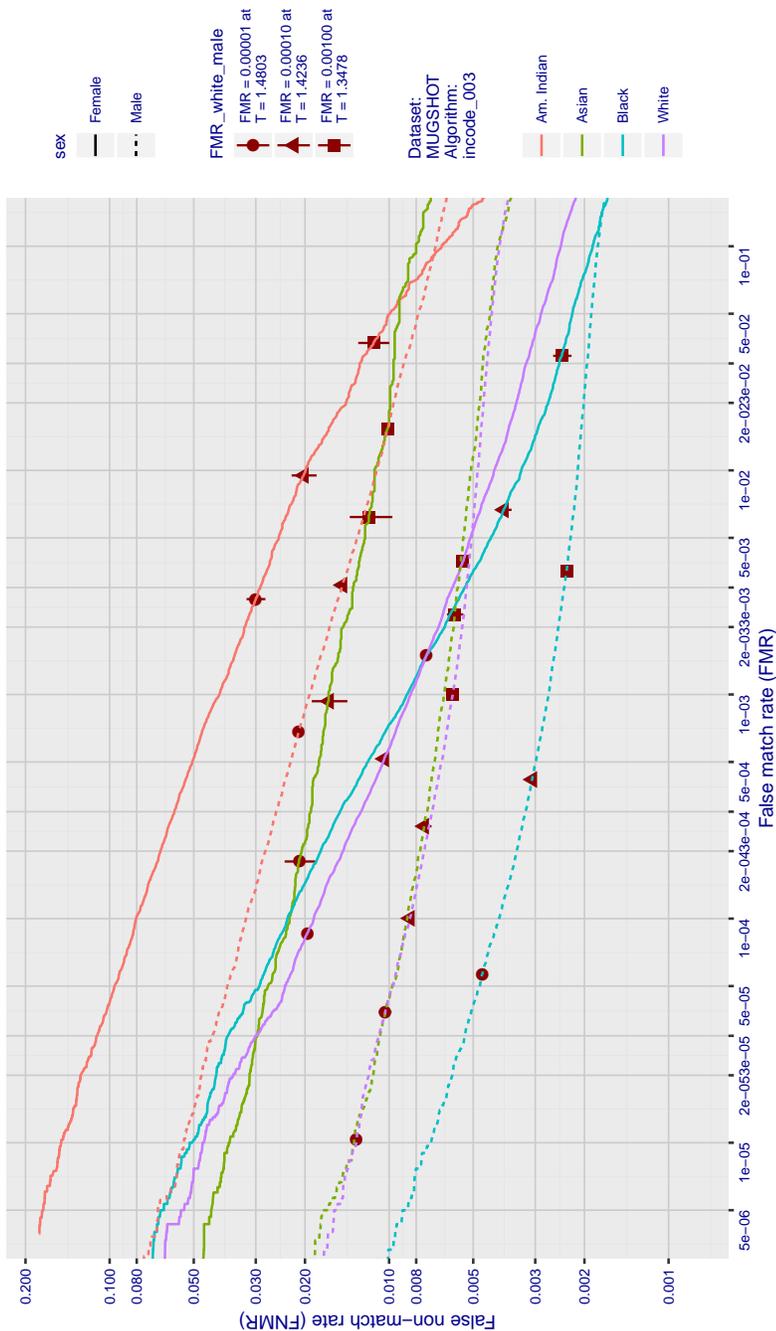

Figure 52: Verification error by sex and race: For algorithm incode-003 verifying mugshot images, the error tradeoff characteristics show false non-match vs. false match rates. The FMR estimates are computed for same-sex and same-race impostor comparisons. Each symbol (circle, triangle, square) corresponds to a fixed threshold - the vertical and horizontal displacements reveal, respectively, differences in FNMR and FMR between demographic groups. The vertical line through each symbol indicates uncertainty related to sample size - it spans 95

This publication is available free of charge from: <https://doi.org/10.6028/NIST.IR.8280>

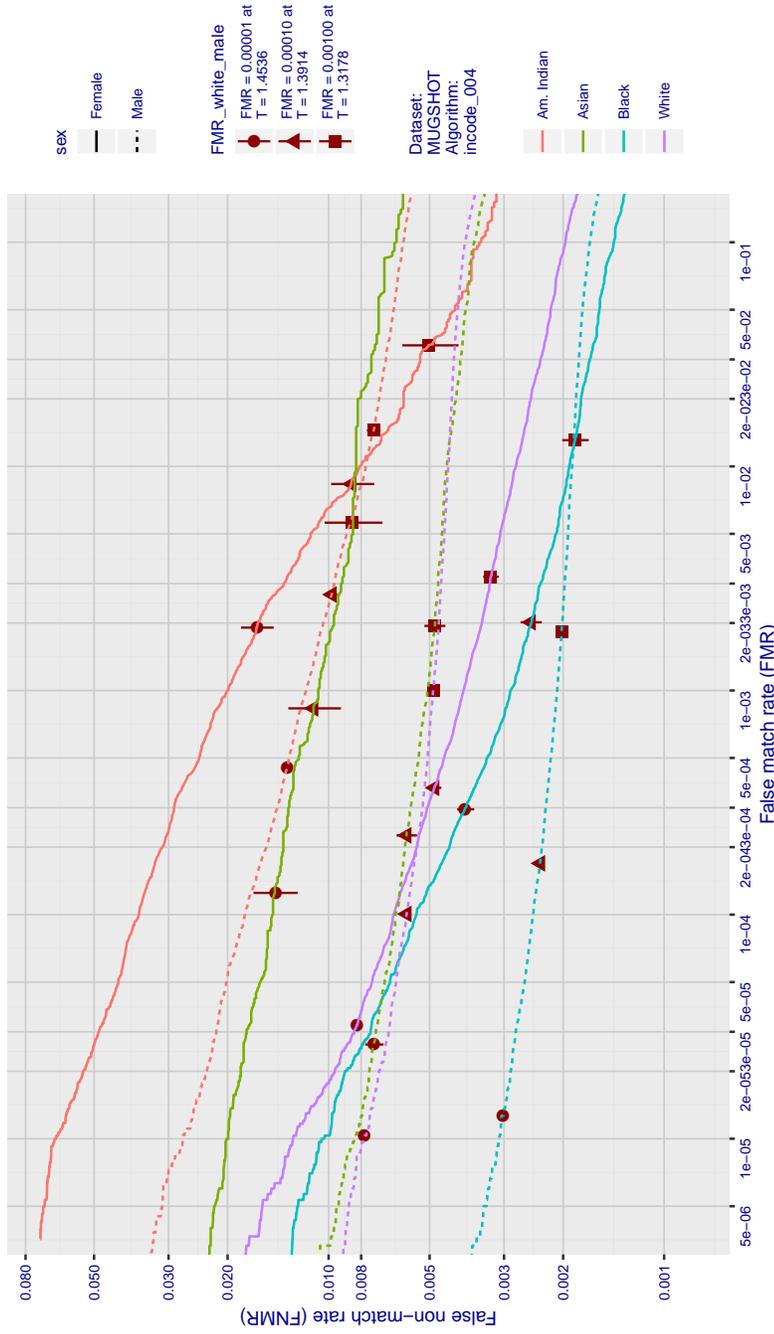

Figure 53: Verification error by sex and race: For algorithm incode-004 verifying mugshot images, the error tradeoff characteristics show false non-match vs. false match rates. The FMR estimates are computed for same-sex and same-race impostor comparisons. Each symbol (circle, triangle, square) corresponds to a fixed threshold - the vertical and horizontal displacements reveal, respectively, differences in FNMR and FMR between demographic groups. The vertical line through each symbol indicates uncertainty related to sample size - it spans 95

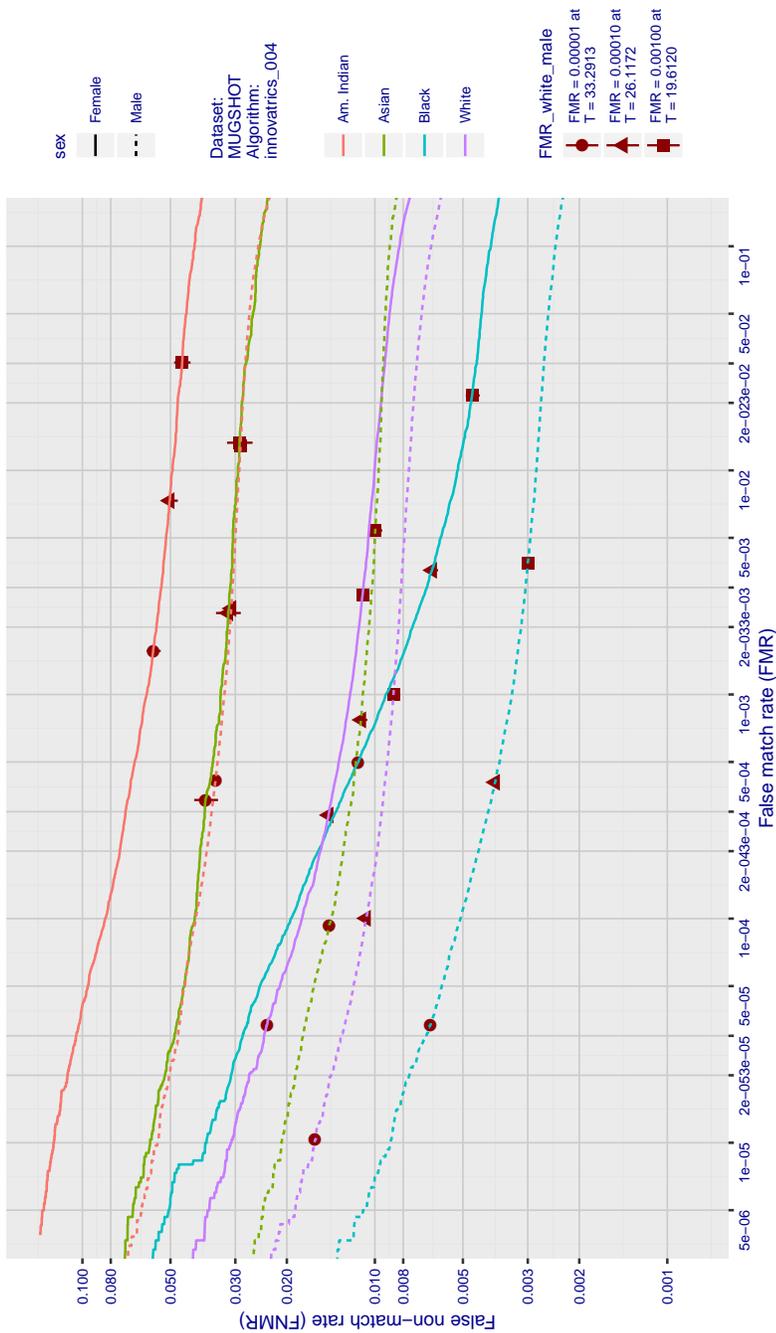

Figure 54: Verification error by sex and race: For algorithm innovatrics-004 verifying mugshot images, the error tradeoff characteristics show false non-match vs. false match rates. The FMR estimates are computed for same-sex and same-race impostor comparisons. Each symbol (circle, triangle, square) corresponds to a fixed threshold - the vertical and horizontal displacements reveal, respectively, differences in FNMR and FMR between demographic groups. The vertical line through each symbol indicates uncertainty related to sample size - it spans 95

This publication is available free of charge from: <https://doi.org/10.6028/NIST.IR.8280>

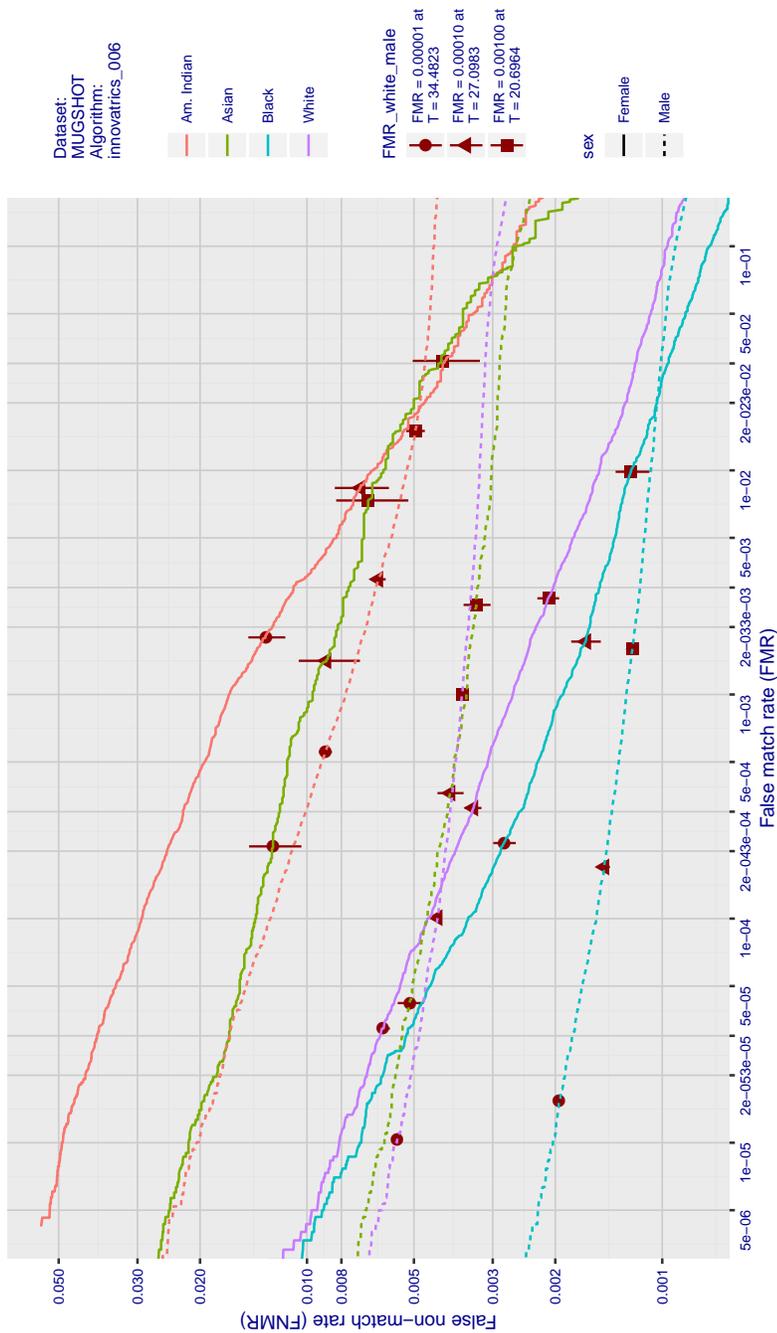

Figure 55: Verification error by sex and race: For algorithm innovatrics-006 verifying mugshot images, the error tradeoff characteristics show false non-match vs. false match rates. The FMR estimates are computed for same-sex and same-race impostor comparisons. Each symbol (circle, triangle, square) corresponds to a fixed threshold - the vertical and horizontal displacements reveal, respectively, differences in FNMR and FMR between demographic groups. The vertical line through each symbol indicates uncertainty related to sample size - it spans 95

This publication is available free of charge from: <https://doi.org/10.6028/NIST.IR.8280>

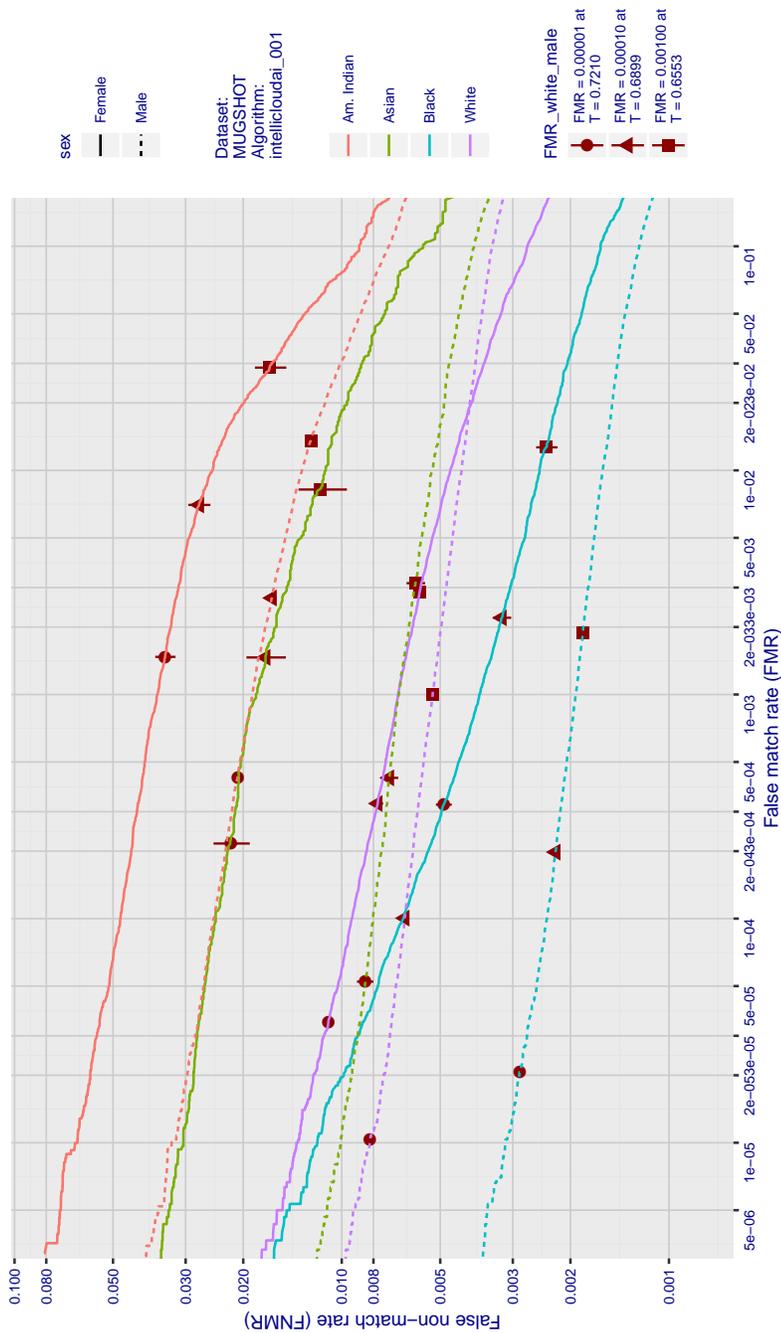

Figure 56: Verification error by sex and race: For algorithm intellicloudai-001 verifying mugshot images, the error tradeoff characteristics show false non-match vs. false match rates. The FMR estimates are computed for same-sex and same-race impostor comparisons. Each symbol (circle, triangle, square) corresponds to a fixed threshold - the vertical and horizontal displacements reveal, respectively, differences in FNMR and FMR between demographic groups. The vertical line through each symbol indicates uncertainty related to sample size - it spans 95

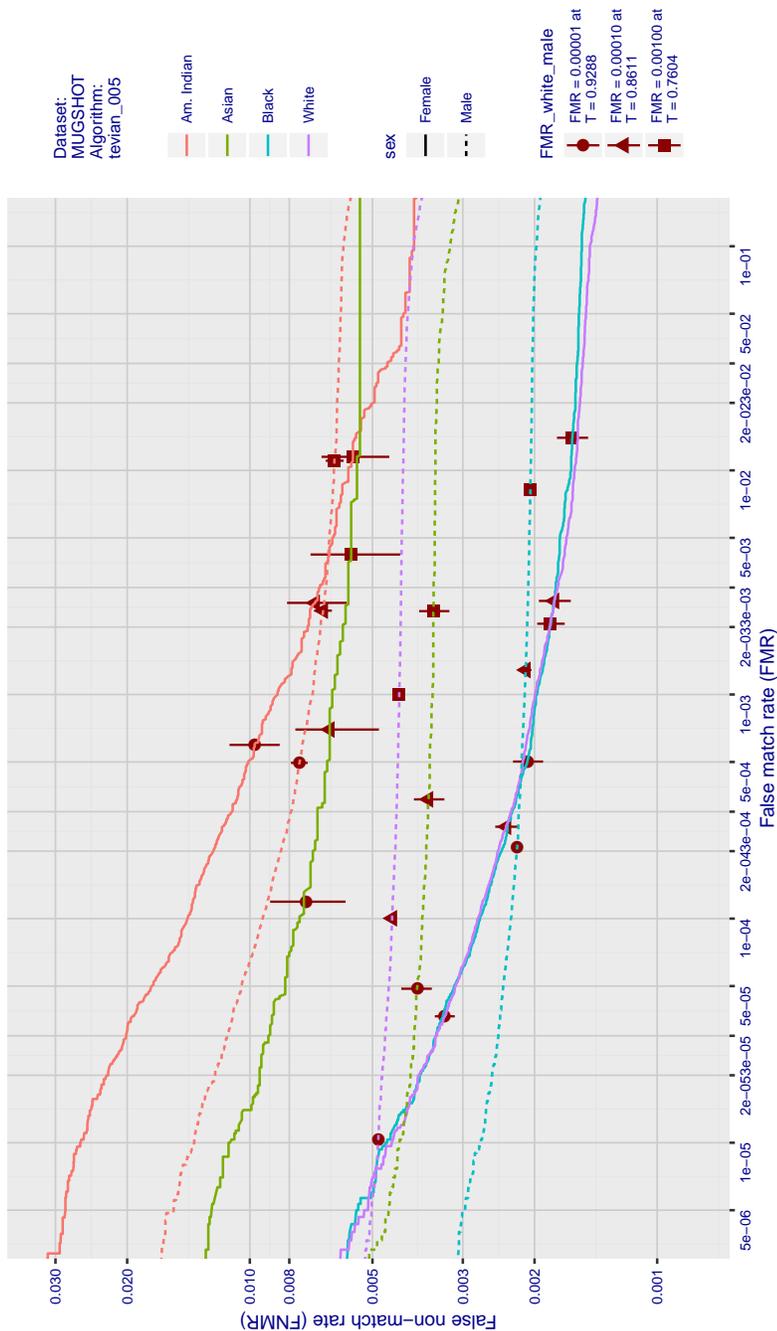

Figure 102: Verification error by sex and race: For algorithm tevian-005 verifying mugshot images, the error tradeoff characteristics show false non-match vs. false match rates. The FMR estimates are computed for same-sex and same-race impostor comparisons. Each symbol (circle, triangle, square) corresponds to a fixed threshold - the vertical and horizontal displacements reveal, respectively, differences in FNMR and FMR between demographic groups. The vertical line through each symbol indicates uncertainty related to sample size - it spans 95
